Various studies, for example [17],[13], show that the Kolmogorov-Smirnov is generally among the least powerful test of those previously described, while the Shapiro-Wilk test is generally the most powerful of the group The only clear advantage the Kolmogorov-Smirnov test has versus the other tests is its visual presentation

Kolmogorov-Smirnov (KS) algorithm Kolmogorov-Smirnov (KS) is a non-parametric hypothesis test that is used to check whether two samples originate from the same distribution Applying KS on a pair of samples takes $O(N \log N)$ time, where N is the total number of sample observations This performance poses a limitation on data stream algo-
